

## 1. /etc/fstab 가

```
echo "n40l:/target /mnt/target nfs _netdev,defaults,x-  
systemd.automount,noauto,x-systemd.mount-timeout=10s 0 0" | sudo tee -a  
/etc/fstab
```

## 2. systmed .mount, .automount

```
sudo systemctl daemon-reload
```

## 3. ,

```
sudo systemctl List-unit-files --type=mount  
sudo systemctl start mnt-target.mount  
fintmnt
```

## 4. Swap file

in /etc/fstab

```
/your/swap/file none swap sw,auto,nofail,x-systemd.makefs,x-  
systemd.after=local-fs.target 0 0
```

as root

```
systemctl daemon-reload  
systemctl list-unit-files --type=swap  
systemctl start your-swap-file  
free -h
```
