

1. /etc/fstab 가

```
echo "n40l:/target /mnt/target nfs _netdev,defaults,x-  
systemd.automount,noauto,x-systemd.mount-timeout=10s 0 0" | sudo tee -a  
/etc/fstab  
</codprism>
```

2. systemd .mount, .automount

```
<codeprism lang=bash>  
sudo systemctl daemon-reload
```

3. ,

```
sudo systemctl --list-unit-files --type=mount  
sudo systemctl start mnt-target.mount  
fintmnt
```
