

Linux Firmware Install

```
cat > install-linux-firmware.sh <<"EOF"
#!/usr/bin/env bash
## Linux firmware install script v.0
WORK_DIR=/usr/src/
cd $WORK_DIR
command -v rfind || ( echo -e "install
rfind\nhttps://github.com/pauldreik/rfind.git" && exit 1 )
command -v pre-commit || sudo pip3 install pre-commit

git clone
https://git.kernel.org/pub/scm/linux/kernel/git/firmware/linux-firmware.git
cd linux-firmware

## Temporary 'Hook: Black run fail' issue fix
sed -i '/github.com\/ambv\/black/{n; s/rev: .*/rev: 24.1.1/;}' .pre-commit-
config.yaml

make check
make install
make dedup
EOF
chmod +x install-linux-firmware.sh
./install-linux-firmware.sh
```
